

## NETTING IT IN!!!

Netball is a game that involves precise passing, communication and pinpoint accuracy. Our netball girls embraced the challenge to take part in this year's MAPCU Netball Competition, not just to win, but hoping to practise all of the attributes mentioned above.

The UCSI team was drawn in Group B together with the likes of Binary University College and Nilai International College. For a team lacking in training facilities and resources, our girls did exceptionally well by drawing a game with Nilai International College 5 - 5 and thrashing Binary University College 9 - 1.

This was enough to bring us through to the quarterfinals of the tournament. We met the team from Taylor's College in the quarterfinals in a very competitive game. Despite scoring a total of 6 nets in the game, our girls lost the game 8 - 6. Netting in points was obviously not a problem as the girls from UCSI proved to be potent in that area. Thina Letchumi and Angela Ong were UCSI's top scorers with 10 points to their credit.

Although disappointed initially, there was still a sense of achievement at the end of it all, when the girls realized how much potential they have and will train harder to make an even bigger impact in next year's MAPCU tournament.
